

**Notice of Study Completion
County of Peterborough
Bridge Design and Municipal Class Environmental Assessment
for the Rehabilitation of the Douglas Bridge**

The County of Peterborough has completed a Municipal Class Environmental Assessment (MCEA) for the Douglas Bridge within the Township of Douro-Dummer located on Rock Road approximately 0.8 km east of County Road 38.

The project is proceeding in accordance with a Schedule 'A+' undertaking, as per the MCEA, to address the deficiencies with the existing Douglas Bridge. As part of the study, alternative solutions such as "do nothing", rehabilitation, and replacement were developed and assessed. The alternative solutions were assessed for potential impacts to the natural, cultural, social, and economic environments. Based on the environmental assessment study, the preferred alternative is rehabilitation of the Douglas Bridge including partial depth concrete repairs, reinstatement of end joints including installation of new compression seals, reconstruction of upper sections of ballast walls and end sections of the distribution slab.

A Public Information Centre (PIC) was held on August 22, 2017. The PIC was to provide information regarding project alternatives/assessments, to answer questions regarding the project and to provide information regarding the determination of the preferred alternative regarding the rehabilitation of the Douglas Bridge.

Following the PIC, the County of Peterborough together with HP Engineering finalized the design and contract/tender package and will be proceeding with the construction phase early summer 2018.

During the construction phase, Rock Road will be closed at the Douglas Bridge for approximately 5-7 weeks with designated signed detour route(s) will be in place.
